

Andris Rožkalns

Junior DevOps & Linux Engineer

I build and automate reliable Linux infrastructure, increasingly with AI agents in the loop. This page runs on it.

- AI-augmented operations
- Automation
- Home Assistant

ABOUT

I am a self-taught Linux and DevOps engineer based in Dortmund, deliberately returning to IT after a long logistics career. My first hands-on experience came at school, where I administered Linux game servers over SSH and FTP, maintained PHP forums and built HTML websites.

Today I design, deploy and operate a production Raspberry Pi 5 homelab with Docker, monitoring, DNS, automation and AI services running around the clock. I am looking for a Junior DevOps or Linux Systems Administrator role and am available from January 2027.

LIVE HOMELAB

RASPBERRY PI 5 · SELF-HOSTED

Prometheus and Node Exporter · refreshed every 60 seconds

EXPERIENCE

Jul 2023 – Dec 2026 planned

Warehouse Employee

Sonepar Deutschland · Dortmund

- High-volume electrical wholesale order processing with scanner systems.
- Cable preparation, forklift operation and rotating-shift logistics.
- Process discipline and reliability directly transferable to IT operations.

May 2020 – Jun 2023

Painting Area Manager / Main Paint Sprayer

SIA Koksne · Latvia

- Managed daily production and warehouse operations, staff tasks and workflow.
- Precision airless coating of wooden windows and doors.

Aug 2011 – Apr 2020

Warehouse / Shop Manager

SIA Apavu Bode · Latvia

- Managed receiving, stock organisation, staff coordination and daily operations.

2008 – 2011

Early IT — self-taught

Secondary school · Riga

- Administered Linux Counter-Strike servers via SSH/FTP and troubleshoot configurations.
- Modified IPB forum templates/plugins and built HTML sites.

- Linux

SSH/FTP

PHP

HTML

PROJECTS

Production Linux server stack

Raspberry Pi 5 with NVMe, Docker Compose, Nginx, AdGuard Home, TLS and Cloudflare Tunnel.

- Raspberry Pi 5
- Docker
- Nginx
- AdGuard
- TLS
- Cloudflare

Hermes self-hosted AI agent FOCUS

Primary/fallback LLM routing, ChromaDB search, persistent memory, Telegram and Home Assistant integration.

- Python
- LLM routing
- ChromaDB
- Telegram
- Home Assistant
- systemd

Monitoring and observability

Prometheus, Grafana and exporters with live health and performance metrics.

- Prometheus
- Grafana
- Node Exporter
- Live metrics

Home automation FOCUS

Matter devices, custom Home Assistant dashboards, energy-cost tracking and reliable automations.

- Home Assistant
- Matter
- MQTT
- Energy
- YAML

Automated maintenance

Controlled APT and container updates, before/after evidence, Telegram reporting and availability checks.

- Bash
- APT
- Docker
- Telegram
- Health checks

Balcony irrigation

ESP32, 15 moisture sensors, relay pump, multiplexer, scheduling and safety limits.

- ESP32
- 15 sensors
- Relay pump
- Multiplexer
- Safety limits
